**Lymphocyte Subset Panel 1 - CD4 Absolute Count Only**

ARUP test code 0095854

Absolute CD4

**3155 cells/uL H (Ref Interval: 430-1800)**

INTERPRETIVE INFORMATION: Lymphocyte Subset 1,  
CD4 Absolute Count

The CD4 cells are Helper T-cells expressing both CD3 and CD4. CD4 T-cell levels are a criterion for categorizing HIV-related clinical conditions by CDC's classification system for HIV infection. The measurement of CD4 T-cell levels has been used to establish decision points for initiating P. jirovecii prophylaxis, antiviral therapy and to monitor the efficacy of treatment. The Public Health Service (PHS) has recommended that CD4 T-cell levels be monitored every three to six months in all HIV-infected persons.

This test was developed and its performance characteristics determined by ARUP Laboratories. It has not been cleared or approved by the US Food and Drug Administration. This test was performed in a CLIA certified laboratory and is intended for clinical purposes.
