Neutrophil Oxidative Burst Assay (DHR)

ARUP test code 0096657

Neutrophil Oxidative Burst

See Note

DHR by Flow Cytometry

Interpretation:

Normal granulocyte dihydrorhodamine fluorescence suggesting normal NADPH oxidase activity.

Julio C. Delgado M.D.
7/22/2019

INTERPRETIVE INFORMATION: Neutrophil Oxidative Burst Assay

White blood cells are incubated with dihydrorhodamine 123 (DHR) and catalase then stimulated with Phorbol 12-Myristate 13-Acetate (PMA). Dihydrorhodamine oxidation to rhodamine by the respiratory burst of the cell is measured by flow cytometry.

Results are reported as the ratio of the mean channel fluorescence of stimulated cells versus unstimulated cells, which yields a stimulation index (SI).

Test developed and characteristics determined by ARUP Laboratories. See Compliance Statement B: aruplab.com/CS
