Allergen, Insects and Venom, Fire Ant, Imported

ARUP test code 0098272

Allergen, Insect, Fire Ant, Imported IgE <0.10 ku/L (Ref Interval: <=0.34)
INTERPRETIVE INFORMATION: Allergen, Fire Ant, Imported

Patients with elevated IgE specific for fire ant venom are at risk for a systemic anaphylactic reaction. This IgE rast uses a purified fire ant venom, rather than whole body extract. It was obtained from Solenopsis Invicta, the dominant fire ant species in the southeastern United States.

Allergen, Interpretation (Not Client Orderable)

ARUP test code 0055041

Allergen, Interp, Immunocap Score IgE See Note

REFERENCE INTERVAL: Allergen, Interpretation

Less than 0.10 ku/L.....Class 0.....No significant level detected
0.10-0.34 ku/L.....Class 0/1...Clinical relevance undetermined
0.35-0.70 ku/L.....Class 1.....Low
0.71-3.50 ku/L.....Class 2.....Moderate
3.51-17.50 ku/L.....Class 3.....High
17.51-50.00 ku/L.....Class 4.....Very High
50.01-100.00 ku/L.....Class 5.....Very High
Greater than 100.00ku/L..Class 6.....Very High

Allergen results of 0.10-0.34 ku/L are intended for specialist use as the clinical relevance is undetermined. Even though increasing ranges are reflective of increasing concentrations of allergen-specific IgE, these concentrations may not correlate with the degree of clinical response or skin testing results when challenged with a specific allergen. The correlation of allergy laboratory results with clinical history and in vivo reactivity to specific allergens is essential. A negative test may not rule out clinical allergy or even anaphylaxis.
