The incidence of circulating anti-sperm antibody (ASA) in the general male population is 10-20%. Vasectomised males have an increased incidence of sperm antibody up to 60-80%. Serum anti-sperm antibodies are also found in 10-15% of infertile women without organic disease. The incidence of circulating ASA depend on both specimen source (serum, seminal fluid, cervical mucus) and the fertility status of the individual.

This test was developed and its analytical performance characteristics have been determined by Quest Diagnostics Nichols Institute San Juan Capistrano. It has not been cleared or approved by FDA. This assay has been validated pursuant to the CLIA regulations and is used for clinical purposes.
