

Patient: [REDACTED]
DOB: [REDACTED] **Age:** 57 **Sex:** [REDACTED]
Patient Identifiers: [REDACTED]
Visit Number (FIN): [REDACTED]

Client: [REDACTED]
Physician: [REDACTED]

ARUP Test Code: 2002109
 Collection Date: 03/01/2022
 Received in lab: 03/02/2022
 Completion Date: 03/03/2022

Total Protein, Serum	6.7 g/dL	(Ref Interval: 6.3-8.2)
Albumin	3.33 g/dL L	(Ref Interval: 3.75-5.01)
Alpha 1 Globulin	0.34 g/dL	(Ref Interval: 0.19-0.46)
Alpha 2 Globulin	0.48 g/dL	(Ref Interval: 0.48-1.05)
Beta Globulin	0.98 g/dL	(Ref Interval: 0.48-1.10)
Gamma	1.57 g/dL H	(Ref Interval: 0.62-1.51)
Immunofixation Reflex	Not Done	

Caution: Reflex to Immunofixation electrophoresis (IFE) is not indicated per results of protein electrophoresis. Immunofixation electrophoresis is a more sensitive technique than serum protein electrophoresis for the identification of small M-proteins found in patients with amyloidosis early or treated myeloma and macroglobulinemia, MGUS, solitary plasmacytoma, and extramedullary plasmacytoma.

SPEP/IFE Interpretation

See Note

Decreased albumin region. Beta-gamma bridging suggestive of liver disease or polyclonal IgA. Slight increase in the gamma region, no M-spike seen.

Note: Electrophoresis image, as applicable, continue on following page.
