Patient: Patient, Example

DOB: 8/6/2019
Gender: Female
Patient Identifiers: 01234567890ABCD, 012345
Visit Number (FIN): 01234567890ABCD
Collection Date: 00/00/0000 00:00

Osmotic Fragility, Erythrocyte

ARUP test code 2002257

Osmotic Fragility

See Note

Patient red blood cells show moderately increased osmotic fragility. Peripheral blood smear reveals many spherocytes.

Patient red blood cells show moderately increased osmotic fragility. Any condition causing spherocytosis e.g. hereditary spherocytosis, or autoimmune hemolytic anemia would cause positivity. Correlation with clinical, peripheral smear evaluation and other laboratory data is highly recommended.

This result has been reviewed and approved by [REDACTED]. Controls were run and performed as expected.

INTERPRETIVE INFORMATION: Osmotic Fragility

For patients with acute hemolysis, a normal red cell osmotic fragility test result cannot exclude an osmotic fragility abnormality since the osmotically labile cells may be hemolyzed and not present. Recommend testing during a state of prolonged homeostasis with stable hematocrit.
