

Client: Example Client ABC123
123 Test Drive
Salt Lake City, UT 84108
UNITED STATES

Physician: Doctor, Example

Patient: Patient, Example

DOB: 1/5/1956
Gender: Female
Patient Identifiers: 01234567890ABCD, 012345
Visit Number (FIN): 01234567890ABCD
Collection Date: 01/01/2017 12:34

Bartonella henselae & B. quintana Antibodies, IgG & IgM

ARUP test code 2002280

Bartonella henselae Antibody IgG

<1:64

INTERPRETIVE INFORMATION: Bartonella henselae Ab, IgG

Less than 1:64 Negative: No significant level of Bartonella henselae IgG antibody detected.
1:64 - 1:128 Equivocal: Questionable presence of Bartonella henselae IgG antibody detected. Repeat testing in 10-14 days may be helpful.
1:256 or greater Positive: Presence of IgG antibody to Bartonella henselae detected, suggestive of current or past infection.

A low positive suggests past exposure or infection, while high positive results may indicate recent or current infection, but are inconclusive for diagnosis. Seroconversion between acute and convalescent sera is considered strong evidence of recent infection. The best evidence for infection is significant change on two appropriately timed specimens where both tests are done in the same laboratory at the same time.

Test developed and characteristics determined by ARUP Laboratories. See Compliance Statement A: aruplab.com/CS

Bartonella henselae Antibody IgM

< 1:16

INTERPRETIVE INFORMATION: Bartonella henselae Antibody, IgM

Less than 1:16 Negative: No significant level of Bartonella henselae IgM antibody detected.
1:16 or greater Positive: Presence of IgM antibody to Bartonella henselae detected, suggestive of current or recent infection.

The presence of IgM antibodies suggest recent infection, low levels of IgM antibodies may occasionally persist for more than 12 months post infection.

Test developed and characteristics determined by ARUP Laboratories. See Compliance Statement A: aruplab.com/CS

Bartonella quintana Antibody, IgG

<1:64

H=High, L=Low, *=Abnormal, C=Critical

Unless otherwise indicated, testing performed at:

ARUP LABORATORIES | 800-522-2787 | aruplab.com
500 Chipeta Way, Salt Lake City, UT 84108-1221
Tracy I. George, MD, Laboratory Director

Bartonella quintana Antibody, IgM

< 1:16

INTERPRETIVE INFORMATION: Bartonella quintana Ab, IgM

Less than 1:16 Negative-No significant level of Bartonella quintana IgM antibody detected.
1:16 or greater Positive-Presence of IgM antibody to Bartonella quintana detected, suggestive of current or recent infection.

The presence of IgM antibodies suggests recent infection. Low levels of IgM antibodies may occasionally persist for more than 12 months post-infection.

Test developed and characteristics determined by ARUP Laboratories. See Compliance Statement A: aruplab.com/CS
