Chromosome Analysis, Products of Conception

ARUP test code 2002288

Chromosome Analysis, Prod Concp See Note (Ref Interval: Normal)

H=High, L=Low, *=Abnormal, C=Critical

Unless otherwise indicated, testing performed at:

 Test Performed: Chromosome Analysis
 Specimen Type: Placental Tissue (Villi)
 Indication for Testing: Products of conception

Number of cells counted: 20
 Number of cells analyzed: 6
 Number of cells karyotyped: 6
 ISCN band level: 400
 Banding method: G-Banding

RESULT
 Abnormal karyotype (Female)

Trisomy 12
 47,XX,+12

INTERPRETATION
 This analysis showed an additional copy (trisomy) of chromosome 12 in each metaphase.

Autosomal trisomy is the most frequent type of cytogenetic abnormality observed in pregnancy loss and is usually sporadic.

No other abnormalities were detected. The standard cytogenetic methodology used in this analysis may not detect small rearrangements or low-level mosaicism and cannot detect submicroscopic deletions or duplications that are detectable by genomic microarray analysis.

Recommendation:
 Genetic counseling

Health care providers with questions may contact an ARUP genetic counselor at (800) 242-2787 ext. 2141.

INTERPRETIVE INFORMATION: Chromosome Analysis,
 Products of Conception

This test was developed and its performance characteristics determined by ARUP Laboratories. It has not been cleared or approved by the US Food and Drug Administration. This test was performed in a CLIA certified laboratory and is intended for clinical purposes.

Counseling and informed consent are recommended for genetic testing. Consent forms are available online.
