INTERPRETATION  
This analysis showed a normal result.

Health care providers with questions may contact an ARUP genetic counselor at (800) 242-2787 ext. 2141.

The standard cytogenetic methodology used in this analysis may not detect small rearrangements or low-level mosaicism and cannot detect submicroscopic deletions or duplications that are detectable by genomic microarray analysis.

NOTE: FISH analysis for aneuploidy of chromosomes X, Y, 13, 18, and 21 was performed on this sample and reported under ARUP accession 20-350-111168. FISH results were NORMAL.
