Physician: Doctor, Example

Patient: Patient, Example

DOB: 10/12/1977
Sex: Female
Patient Identifiers: 01234567890ABCD, 012345
Visit Number (FIN): 01234567890ABCD
Collection Date: 01/01/2017 12:34

Pancreatobiliary FISH Final Report (Refer to test 2002528 Pancreatobiliary FISH)

ARUP test code 2002461

Pancreatobiliary FISH Specimen Source: Common Bile Duct Stricture

Pancreatobiliary FISH Clinical History: Clinical Information: PSC
Lab ID Number: [REDACTED]
ICD Code(s): UNKNOWN

Pancreatobiliary FISH Gross Description: Received 30 mls fluid in cytolyt with brush.

Fixative: Cytolyt

Pancreatobiliary FISH Interpretation: Negative
Interpretation: Negative results indicate <5 cells with gains of two or more chromosomes commonly associated with pancreatobiliary carcinoma, within the cells collected in this specimen. Negative results in the presence of other symptoms/signs of pancreatobiliary carcinoma may suggest the possibility of a false-negative test. In this circumstance, additional clinical studies to exclude pancreatobiliary carcinoma should be pursued, as clinically indicated.

The Urovysion(TM) Kit was used to detect aneuploidy for chromosomes 3, 7, and 17 via fluorescence in situ hybridization (FISH). Results from this test are intended for use, in conjunction with and not in lieu of current standard diagnostic procedures, as an aid for initial diagnosis of pancreatobiliary carcinoma.

Test developed and characteristics determined by ARUP Laboratories. See Compliance Statement B: aruplab.com/CS
