Physician: Doctor, Example

Patient: Patient, Example

DOB: 6/5/1950
Gender: Male
Patient Identifiers: 01234567890ABCD, 012345
Visit Number (FIN): 01234567890ABCD
Collection Date: 00/00/0000 00:00

Pancreatobiliary FISH Final Report (Refer to test 2002528 Pancreatobiliary FISH)
ARUP test code 2002461

Pancreatobiliary FISH Specimen Distal Bile Duct Stricture Brushing
Source

Pancreatobiliary FISH Clinical History	Clinical Information: No clinical information provided.
Pancreatobiliary FISH Gross Description	Received 30mL fluid in PreservCyt with brush.
Fixative	PreservCyt
Pancreatobiliary FISH Interpretation	<p>Positive</p> <p>Interpretation: The FISH results show numerical alterations in two or more chromosomes (polysomy), present in five or more cells. These results have been associated with an increased risk of pancreatobiliary carcinoma, but are not specific for that diagnosis. In the absence of corroborative evidence for pancreatobiliary carcinoma, further workup is recommended. Clinical correlation is required. Fritcher and Halling, Current Opinion in Gastroenterology 2010, 26:259-264</p> <p>The Urovysion(TM) Kit was used to detect aneuploidy for chromosomes 3, 7, and 17 via fluorescence in situ hybridization (FISH). Results from this test are intended for use, in conjunction with and not in lieu of current standard diagnostic procedures, as an aid for initial diagnosis of pancreatobiliary carcinoma.</p> <p>This test was developed and its performance characteristics determined by ARUP Laboratories. It has not been cleared or approved by the US Food and Drug Administration. This test was performed in a CLIA certified laboratory and is intended for clinical purposes.</p>
