

Client: Example Client ABC123
123 Test Drive
Salt Lake City, UT 84108
UNITED STATES

Physician: Doctor, Example

Patient: Patient, Example

DOB: 1/14/1935
Sex: Male
Patient Identifiers: 01234567890ABCD, 012345
Visit Number (FIN): 01234567890ABCD
Collection Date: 01/01/2017 12:34

Pancreatobiliary FISH Final Report (Refer to test 2002528 Pancreatobiliary FISH)

ARUP test code 2002461

Pancreatobiliary FISH Specimen Bile Duct Brushing
Source

Pancreatobiliary FISH Clinical History Clinical Information: No clinical information provided.

Pancreatobiliary FISH Gross Description Received 30 mls fluid in cytolyt with brush.

Fixative Fixative

Pancreatobiliary FISH Interpretation

Positive

Interpretation: The FISH results show numerical alterations in two or more chromosomes (polysomy), present in five or more cells. These results have been associated with an increased risk of pancreatobiliary carcinoma, but are not specific for that diagnosis. In the absence of corroborative evidence for pancreatobiliary carcinoma, further workup is recommended. Clinical correlation is required. Fritcher and Halling, Current Opinion in Gastroenterology 2010, 26:259-264

The Urovysion(TM) Kit was used to detect aneuploidy for chromosomes 3, 7, and 17 via fluorescence in situ hybridization (FISH). Results from this test are intended for use, in conjunction with and not in lieu of current standard diagnostic procedures, as an aid for initial diagnosis of pancreatobiliary carcinoma.

Test developed and characteristics determined by ARUP Laboratories. See Compliance Statement B: aruplab.com/CS
