Alternative Complement Pathway Activity (AH50)

ARUP test code 2005373

Alternative Complement Pathway Activity	34 % Normal	(Ref Interval: >=31)
---	-------------	----------------------

Normal activity in complement alternative pathway functional (AH50) activity suggests normal presence and function of complement components C3-C9. However, normal AH50 result can also occur in the presence of low levels of complement components due to excess presence of complement proteins in human serum. If clinically indicated, measurement of individual complement components is recommended. Normal AH50 result with low total complement functional (CH50, test code 3002575) activity suggests defects in the classical complement pathway.

Interpretive Information: Alternative Complement Pathway Activity

This test was developed and its performance characteristics determined by ARUP Laboratories. It has not been cleared or approved by the U.S. Food and Drug Administration. This test was performed in a CLIA-certified laboratory and is intended for clinical purposes.
