HIT Abs, PF4 IgA - Result Negative

HIT Abs, PF4 IgA - Interpretation

See Note

Results obtained with this patient's serum were negative. These results do not support a diagnosis of Heparin-Induced Thrombocytopenia (HIT). Optical Density (O.D.) values greater than or equal to 0.400 that inhibit by at least 49% in the presence of high dose (100U/ml) heparin are considered positive in this assay. This test was developed and its performance characteristics determined by Versiti Wisconsin, Inc. It has not been cleared or approved by the US Food and Drug Administration. HIT Abs, PF4 IgM - Interpretation

See Note

Results obtained with this patient's serum are positive and may support a diagnosis of Heparin-Induced Thrombocytopenia (HIT) if clinical findings suggestive of HIT are present. Optical Density (O.D.) values greater than or equal to 0.570 that inhibit by at least 30% in the presence of high dose (100U/ml) heparin are considered positive in this test.
