Adenovirus, Quantitative PCR
ARUP test code 2007192

Adenovirus, Quant. Source
Whole Blood

Adenovirus, Quant. Copy/mL
Not Quantified cpy/mL

Adenovirus, Quant. Log copy/mL
Not Quantified - Adenovirus DNA was detected, but at a level below 3.0 log copies/mL (1,000 copies/mL). Virus detected at a level below 3.0 log copies/mL cannot be accurately quantified by this assay.

Adenovirus, Quant. Interp
Detected * (Ref Interval: Not Detected)

INTERPRETIVE INFORMATION: Adenovirus, Quantitative PCR

The quantitative range of this test is 3.0-7.0 log copies/mL (1,000-10,000,000 copies/mL).

A negative result (less than 3.0 log copies/mL or less than 1,000 copies/mL) does not rule out the presence of PCR inhibitors in the patient specimen or Adenovirus DNA concentrations below the level of detection of the test. Inhibition may also lead to underestimation of viral quantitation.

No international standard is currently available for calibration of this test. Caution should be taken when interpreting results generated by different test methodologies.

Test developed and characteristics determined by ARUP Laboratories. See Compliance Statement A: arulab.com/CS
