Ethyl Glucuronide and Ethyl Sulfate, Urine, Quantitative

ARUP test code 2007909

Ethyl Glucuronide, Urn, Quant >10000 ng/mL

Ethyl Sulfate, Urn, Quant >10000 ng/mL

INTERPRETIVE INFORMATION: Ethyl Glucuronide and Ethyl Sulfate, Urine Quantitative

Ethyl glucuronide (EtG) and Ethyl Sulfate (EtS) are direct metabolites of ethanol. EtG and EtS can be detected up to 80 hours in urine after ethanol ingestion and the presence of both metabolites can be used as markers for recent alcohol use. The presence of EtG, alone in urine, is not a unique marker of ethanol ingestion. False positive EtG results can occur from microbial formation or from fermentation and false negative EtG results can occur from bacterial degradation. The analytical measurement range is 100-10,000 ng/mL.

Test developed and characteristics determined by ARUP Laboratories. See Compliance Statement B: aruplab.com/CS
