Pipecolic Acid, Urine

ARUP test code 2008131

Creatinine, Urine (Pipecolic) 7 mg/dL

This urine specimen contains less than 10 mg/dL creatinine and may be too dilute for accurate testing. Repeat analysis on a more concentrated urine specimen is recommended if clinically indicated.

Pipecolic Acid, Urine **24.7** **H** (Ref Interval: <=12.1)

Pipecolic Acid, Urine - Interpretation

See Note

In this sample the excretion of pipecolic acid was mildly elevated. Isolated increases in pipecolic acid can be seen in patients with peroxisomal disorders, although usually higher concentrations are observed in these conditions. In view of normal pipecolic acid result in plasma, this possibility is unlikely. Mild elevation of pipecolic acid can also be secondary to immature/impaired hepatocellular function. would repeat this study if clinically indicated. Clinical correlation is necessary for further interpretation of this result

Results reviewed and interpreted by [REDACTED]

INTERPRETIVE INFORMATION: Pipecolic Acid, Urine

Units for pipecolic acid in urine are millimole per mole of creatinine (mmol/mol CRT)

This test was developed and its performance characteristics determined by ARUP Laboratories. It has not been cleared or approved by the US Food and Drug Administration. This test was performed in a CLIA certified laboratory and is intended for clinical purposes.
