

Client: Example Client ABC123  
123 Test Drive  
Salt Lake City, UT 84108  
UNITED STATES

Physician: Doctor, Example

**Patient: Patient, Example**

**DOB:** 6/19/2020

**Gender:** Female

**Patient Identifiers:** 01234567890ABCD, 012345

**Visit Number (FIN):** 01234567890ABCD

**Collection Date:** 00/00/0000 00:00

**Buprenorphine, Meconium, Quantitative**

ARUP test code 2011601

Buprenorphine, Mec, Quant

Positive

Confirmed POSITIVE by LC-MS/MS for Buprenorphine by the presence of the following Analyte (s):

Buprenorphine: 25 ng/g  
Norbuprenorphine: 291 ng/g

Interpretive Data: Drug Confirmation, Buprenorphine, Mec

Drugs Covered: Buprenorphine and norbuprenorphine.

Positive Cutoff: 20 ng/g

Meconium begins to form between the 12th and 16th week of gestation. Meconium drug testing can detect maternal drug use during the last 4 to 5 months of pregnancy. A negative result does not exclude the possibility that a mother used drugs during pregnancy. Detection of drug use depends on the quantity and quality of the specimen tested as well as the pattern and frequency of drug(s) used by mother. The concentration value must be greater than or equal to the cutoff to be reported as positive. Although not likely, the presence of drugs administered during labor and delivery may be detected in meconium. Interpretive questions should be directed to the laboratory.

For medical purposes only; not valid for forensic use.

Test developed and characteristics determined by ARUP Laboratories. See Compliance Statement B: aruplab.com/CS
