INTERPRETIVE INFORMATION: Hepatitis E Virus by Quantitative PCR
 The quantitative range of this assay is 3.3- 8.3 log IU/mL (1,800- 180,000,000 IU/mL). One IU/mL of HEV RNA is approximately 2.25 copies/mL.

A negative result (less than 3.3 log IU/mL or less than 1,800 IU/mL) does not rule out the presence of PCR inhibitors in the patient specimen or HEV RNA concentrations below the level of detection of the test. Inhibition may also lead to underestimation of viral quantitation.
