<1:8

REFERENCE RANGE: <1:8
INTERPRETIVE CRITERIA:
<1:8 Antibody Not Detected
> or = 1:8 Antibody Detected
Single titers of > or = 1:64 are indicative of recent or current infection. Titers of 1:8 - 1:32 may be indicative of either past or recent infection, since CF antibody levels persist for only a few months. A four-fold or greater increase in titer between acute and convalescent specimens confirms the diagnosis.
