INTERPRETIVE INFORMATION: Meningitis Encephalitis Panel by PCR

The meningitis/encephalitis panel is NOT a replacement for CSF bacterial and/or fungal culture and Cryptococcal antigen testing for at-risk patients. Non-K1 E. coli serotypes and non-encapsulated strains of Neisseria meningitidis are NOT detected. The panel does NOT differentiate active from latent herpes virus infections. Test results should be interpreted in the context of host factors and other laboratory information.
