Physician: Doctor, Example

Patient: Patient, Example

DOB: 5/11/1989
Gender: Female
Patient Identifiers: 01234567890ABCD, 012345
Visit Number (FIN): 01234567890ABCD
Collection Date: 00/00/0000 00:00

Herpesvirus 6 Antibody, IgG

ARUP test code 2013423

Herpesvirus 6 Antibody, IgG

<1:10

REFERENCE RANGE: <1:10
INTERPRETIVE CRITERIA:
<1:10 Antibody Not Detected
> or = 1:10 Antibody Detected
Human Herpesvirus 6 (HHV-6) infects T-lymphocytes, and has been identified as an etiologic agent of exanthema subitum. Rises in antibody titers to HHV-6 have been detected during infection with other viruses. In seroepidemiology studies of the prevalence of exposure using serum screening dilutions of 1:10, the detection of antibody in a mid-life population approaches 100%. Due to this high prevalence of HHV-6 antibody, correlations of single titers with specific diseases are of little clinical value.
Serologic evidence of acute infection or reactivation of HHV-6 is demonstrated by a significant rise or seroconversion of IgM and IgG titers.
This test was developed and its analytical performance characteristics have been determined by Quest Diagnostics Infectious Disease. It has not been cleared or approved by FDA. This assay has been validated pursuant to the CLIA regulations and is used for clinical purposes.
Performed at Quest Diagnostics Infectious Disease, 33608 Ortega Highway, San Juan Capistrano, CA 92675, Hollis J. Batterman MD, Director, CLIA 05D0644251
