Test Information

Small LDL Particle Number and LDL Particle Size are associated with CVD risk, but not after LDL Particle Count is taken into account.

Reference intervals for the measurements of particle counts and sizes from Nuclear Magnetic Resonance (NMR) spectroscopy are currently only available for adults of 18 years of age and older.

Interpretive data for LDL Cholesterol, HDL Cholesterol, Triglycerides, and Total Cholesterol are based on NCEP ATP III guidelines and are intended for use in adults. For interpretive guidance for pediatric patients, please visit www.aruplab.com.

This test was developed and its performance characteristics determined by ARUP Laboratories. It has not been cleared or approved by the U.S. Food and Drug Administration. This test was performed in a CLIA certified laboratory and is intended for clinical purposes.
