

Client: Example Client ABC123  
123 Test Drive  
Salt Lake City, UT 84108  
UNITED STATES

Physician: Doctor, Example

**Patient: Patient, Example**

**DOB:** 2/28/1949  
**Gender:** Female  
**Patient Identifiers:** 01234567890ABCD, 012345  
**Visit Number (FIN):** 01234567890ABCD  
**Collection Date:** 00/00/0000 00:00

**Hepatitis B Virus (HBV) Perinatal Exposure Follow-up by CIA, Panel**

ARUP test code 2014285

Hepatitis B Surface Antigen                      See Confirm                      (Ref Interval: Negative)  
  
The HBSAg screen is repeatedly reactive at a low level. Refer to HBSAg Confirmation test for additional detail.

INTERPRETIVE INFORMATION: Hepatitis B Surface Ag

This assay should not be used for blood donor screening, associated re-entry protocols, or for screening Human Cells, Tissues and Cellular and Tissue-Based Products (HCT/P).

Hepatitis B Surface Antibody                      15.00 IU/L  
  
The anti-HBs is greater than or equal to 10 IU/L. This patient has either had an antibody response to HBV vaccination, received a transfusion, or has recovered from HBV infection. This patient should be considered immune to hepatitis B.  
  
An anti-HBs result greater than or equal to 10 IU/L implies immunity. For post-vaccination antibody testing guidelines for the general public refer to MMWR December 23, 2005/Vol. 54(No. 16);1-23, and for healthcare workers refer to MMWR December 20, 2013/Vol. 62(No. 10);1-19.  
  
Reference Interval: anti-HBs  
9.99 IU/L or less ..... Negative  
10.00 IU/L or greater .... Positive  
Results greater than 1,000.00 IU/L are reported as greater than 1,000.00 IU/L.

Hepatitis B Panel Interp                      See Note  
  
The result pattern of the HBSAg and anti-HBs is consistent with one of three clinical scenarios:(1) a false-positive HBSAg result in a person recently vaccinated against HBV, (2) HBV infection with passively acquired anti-HBs (transfusion with blood or FFP), or (3) early HBV infection. Depending on clinical findings, testing on a new specimen for HBSAg, anti-HBs, and anti-HBc may be useful.

H=High, L=Low, \*=Abnormal, C=Critical

**Hepatitis B Virus Surface Antigen, Confirmation**

ARUP test code 0020128

Hepatitis B Surface Antigen Confirmation

**Positive \* (Ref Interval: Non Confirmed)**

INTERPRETIVE INFORMATION: Hepatitis B Surface Ag Confirmation

This assay should not be used for blood donor screening, associated re-entry protocols, or for screening Human Cells, Tissues and Cellular and Tissue-Based Products (HCT/P).
