

Client: Example Client ABC123
123 Test Drive
Salt Lake City, UT 84108
UNITED STATES

Physician: Doctor, Example

Patient: Patient, Example

DOB: Unknown
Gender: Unknown
Patient Identifiers: 01234567890ABCD, 012345
Visit Number (FIN): 01234567890ABCD
Collection Date: 00/00/0000 00:00

Maternal T Cell Engraftment in SCID

ARUP test code 2014699

Specimen, Maternal Engraftment	whole Blood
Mat Engraftment, Informative Loci	4
Maternal Engraftment, Interpretation	<p>Mixed</p> <p>Patient and Maternal derived CD3 positive T cells present. 50% Maternally derived cells 50% Patient derived cells 1 Margin of error</p> <p>The CD3+ cell content of the isolated fraction typically ranges from 92 - 99%.</p> <p>This result has been reviewed and approved by [REDACTED]</p> <p>INTERPRETIVE INFORMATION: Maternal T Cell Engraftment in SCID</p> <p>INDICATION: Severe combined immunodeficiency (SCID) patients lack T cells and cannot recognize and reject maternal T cells from maternal-fetal transfusion. Maternal T cell can proliferate in the absence of host T cells, leading to difficulty in determining the host T cell numbers required for the diagnosis of SCID and/or can cause graft-versus-host disease-line (GVHD) presentation.</p> <p>METHODOLOGY: PCR followed by capillary electrophoresis. Specimens are analyzed using 15 autosomal markers (D8S1179, D21S11, D7S820, CSF1PO, D3S1358, TH01, D13S317, D16S539, D2S1338, D19S433, vwa, TPOX, D18S51, D5S818, and FGA) and one gender marker (amelogenin).</p> <p>KIT USED: AmpFLSTR Identifiler PCR Amplification Kit, Applied Biosystems.</p> <p>LIMIT OF DETECTION: 2 percent of minor cell population.</p> <p>This test was developed and its performance characteristics determined by ARUP Laboratories. It has not been cleared or approved by the US Food and Drug Administration. This test was performed in a CLIA certified laboratory and is intended for clinical purposes.</p>
