DOB: Age: Gender:		Collection Date: 05/14/2019
Patient Identifiers:	Physician:	Received in lab: 05/16/2019
Visit Number (FIN):		Completion Date: 05/16/2019

Interpretation: SCREEN POSITIVE
Follow-up for risk of Down syndrome is suggested

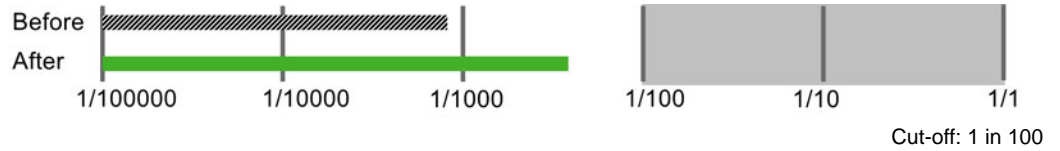

Down syndrome (DS): Positive

Risk before test: **1 in 249**
 Risk after test: **1 in 11**

Trisomy 18 (T18): Negative

Risk before test: **1 in 1220**
 Risk after test: **1 in 260**

Comments:

The risk of Down syndrome is greater than the screening cut-off. Other outcomes of positive screens include normal pregnancy, over-estimated gestational age, and fetal demise. Genetic counseling regarding the risks and benefits of cell-free DNA (NIPT) and fetal diagnostic testing is suggested. If you have questions regarding this screen, please call Genetics at 800-242-2787 ext 2141.

The risk of trisomy 18 is less than the screening cut-off.

The nuchal translucency measurement is above the 99th percentile. This has been associated with an increased risk of congenital heart defects as well as other nonchromosomal anomalies. Clinical follow-up regarding this finding may be warranted.
