Comments:

This is an interim report for an integrated screening test panel. The first sample was processed and all required first trimester information has been received. The MOMs, risks, and screening results will be reported after we receive and process the second trimester sample.

Second trimester serum markers are needed to provide a final interpretation. The ideal time to draw the second sample is between 16 and 18 weeks gestation. For this patient, ideally collect between 03-10-23 and 03-24-23. However, the sample may be drawn as early as 02-24-23 or as late as 05-11-23 and still provide valid information.
