DOB: Age: Sex:		
Patient Identifiers:	Physician:	Collection Date: Received in lab: Completion Date:
Visit Number (FIN):		

This is an interim report for an integrated screening test panel. The first sample was processed and all required first trimester information has been received. The MoMs, risks, and screening results will be reported after we receive and process the second trimester sample.

Second trimester serum markers are needed to provide a final interpretation. The ideal time to draw the second sample is between 16 and 18 weeks gestation. For this patient, ideally collect between 03-10-23 and 03-24-23. However, the sample may be drawn as early as 02-24-23 or as late as 05-11-23 and still provide valid information.

PAPP-A Maternal Compliance Statement: This test was developed and its performance characteristics determined by ARUP Laboratories. It has not been cleared or approved by the US Food and Drug Administration. This test was performed in a CLIA certified laboratory and is intended for clinical purposes.

Maternal Screen Interpretation Compliance Statement: This test was developed and its performance characteristics determined by ARUP Laboratories. It has not been cleared or approved by the US Food and Drug Administration. This test was performed in a CLIA certified laboratory and is intended for clinical purposes.

Patient Information Used in Risk Calculations:		Marker	Measurement
Maternal Age at Delivery:	35.3 yr	PAPP-A	1757.2 ng/mL
Maternal Weight:	196.0 lbs.	NT	1.30 mm
Estimated Due Date:	08-25-23		
Gestational Age at Draw:	12 wks, 5 days		
Number of Fetuses:	Singleton		
Maternal Race:	Nonblack		
Current Smoker:	Yes		
Family History of Aneuploidy:	No		
Specimen:	Initial sample		
Crown Rump Length:	65.0 mm
