ADAMTS13 Reflex Panel

ARUP test code 3000239

ADAMTS13 Activity

41 % L (Ref Interval: >=61)

The ADAMTS13 panel result demonstrates ADAMTS13 activity is greater than 30%. Because thrombotic thrombocytopenic purpura (TTP) is typically associated with severe ADAMTS13 deficiency (activity of less than 10%), testing for ADAMTS13 antibodies/inhibitor was not performed in the reflexive panel. Close clinical correlation is recommended for proper interpretation.

INTERPRETIVE INFORMATION: ADAMTS13 Activity

ADAMTS13 levels of less than 10 percent may be associated with either inherited (Upshaw-Schulman Syndrome) or acquired thrombotic thrombocytopenic purpura (TTP).

A variety of medical conditions may result in a mild to moderate deficiency of ADAMTS13 activity. Recent plasma exchange therapy may raise the observed ADAMTS13 activity.
