14-3-3 Protein Tau, Total, CSF

ARUP test code 3001255

14-3-3 Protein Tau, Total, CSF

See Note

Specimen Condition: clear

Estimated probability of prion disease in this patient: 5%

Test Name (specimen)	Result	Reference Range for Non-Prion Disease
RT-QuIC (CSF)*	negative	negative

*RT-QuIC identifies the disease-causing agent

Test Name (specimen)	Result	Reference Range for Non-Prion Disease
T-tau protein (CSF)++	705 pg/ml	0-1149 pg/ml

14-3-3 protein (CSF)++ Positive negative

++indirect markers of neurodegenerative disease

These tests must not be used to exclude prion disease. A definitive diagnosis of prion disease can only be given after thorough examination of autopsy brain tissue. If prion disease is still suspected, the laboratory is able to offer a no-cost autopsy to determine whether or not prions are the cause of disease. Laboratory staff are available to work with healthcare providers and the patient's family to plan an autopsy, if desired.

These tests were developed and their performance characteristics determined by the NPDPS, and have not been cleared or approved by the FDA. These assays should be used in conjunction with other clinical, pathological and laboratory findings. Please note, RT-QuIC and 14-3-3 protein tests cannot be performed reliably when there is a significant presence of blood in the CSF specimen.
