123 Test Drive
Salt Lake City, UT 84108
UNITED STATES

Patient: Patient, Example

DOB: 9/9/1944
Gender: Male
Patient Identifiers: 01234567890ABCD, 012345
Visit Number (FIN): 01234567890ABCD
Collection Date: 00/00/0000 00:00

Aggressive B-Cell Lymphoma Reflex Panel by FISH, Tissue

ARUP test code 3001495

MYC FISH Result

Negative

Controls were run and performed as expected.
This result has been reviewed and approved by [REDACTED]

INTERPRETIVE INFORMATION: MYC Rearrangement, FISH

MYC fluorescence in situ hybridization (FISH) analysis is designed to detect 8q24 (MYC) translocations regardless of rearrangement partners. Differentially labeled probes targeting the upstream (5') and downstream (3') flanking regions of the MYC gene were used (Abbott Molecular).

When 10 percent or more of the cells evaluated show a classic (typical) abnormal signal pattern, it is considered a positive result. If this signal pattern is less than 10 percent, then a combination of other rearranged signal patterns with the classic abnormal pattern may be considered positive if equal to or greater than 20 percent. Based on the assay performance during test validation, the test is expected to detect 100 percent of MYC rearrangements in patients with MYC-rearranged lymphomas, except for rare instances of cryptic rearrangements. Assay range and limit of detection were generated using normal and known positive cases respectively.

MYC rearrangement is seen in a variety of B-cell lymphomas, including diffuse large B-cell lymphomas (DLBCL), Burkitt lymphoma, and "double hit" or "triple hit" lymphomas. Results should be correlated with clinical, morphologic, and immunophenotypic data.

Fluorescence in situ hybridization (FISH) analysis was performed on a section from a paraffin-embedded tissue block. The area(s) for analysis were selected by histopathologic review of a matching hematoxylin- and eosin-stained section.

The use of this assay on decalcified tissues has not been validated. Results should be interpreted with caution.

Controls performed appropriately.

This test was developed and its performance characteristics determined by ARUP Laboratories. It has not been cleared or approved by the US Food and Drug Administration. This test was performed in a CLIA certified laboratory and is intended for clinical purposes.
