**Muscle-Specific Kinase (MuSK) Antibody, IgG**

Muscle-Specific Kinase (MuSK) Ab, IgG  

**Result:** 0.04 nmol/L  
**Ref Interval:** 0.00-0.03

**Interpretive Information:**

- **Negative:** 0.00-0.03 nmol/L
- **Positive:** 0.04 nmol/L or greater

Muscle-specific kinase (MuSK) antibody is found in a subset of patients with myasthenia gravis, primarily those seronegative for muscle acetylcholine receptor (AChR) antibody. Decreasing antibody levels may be associated with therapeutic response; therefore, clinical correlation must be strongly considered. A negative test result does not rule out a diagnosis of myasthenia gravis.

Test developed and characteristics determined by ARUP Laboratories. See Compliance Statement A: aruplab.com/CS
