Influenza, SARS-CoV-2, and RSV by NAA

ARUP test code 3003443

Influenza, SARS-CoV-2, and RSV Source Nasopharyngeal

Influenza by NAA

Not Detected

BACKGROUND INFORMATION: Influenza, SARS-CoV-2, and RSV by NAA

This test is intended for the qualitative detection and differentiation of 2019 novel coronavirus SARS-CoV-2, influenza A/B virus, and/or RSV virus RNA from individuals suspected of respiratory viral infection.

Not Detected results do not rule out the presence of PCR inhibitors in the patient specimen or assay-specific nucleic acid in concentrations below the level of detection by the assay.

Detected results are indicative of the presence of SARS-CoV-2, influenza A/B, or RSV virus RNA. Due to the complexity of nucleic acid amplification methodologies, there may be a risk of false-positive results. Clinical correlation with patient history and other diagnostic information is necessary to determine patient infection status.

Reliable results are dependent on adequate specimen collection, transport, storage, and handling.

This test was developed and its performance characteristics determined by ARUP Laboratories. It has not been cleared or approved by the US Food and Drug Administration. This test was performed in a CLIA certified laboratory and is intended for clinical purposes.
