JAK2 (V617F) Mutation by ddPCR, Quantitative

ARUP test code 3003751

JAK2 QNT, Source whole Blood

JAK2 V617F Percent Mutated Alleles 10.0 %

JAK2 V617F Mutation by PCR

Detected *

There is evidence of the JAK2 V617F mutation by ddPCR analysis.
This result has been reviewed and approved by [REDACTED]

INTERPRETIVE INFORMATION: JAK2 (V617F) Mutation by ddPCR, Quant
This assay is designed to detect the point mutation c.1849G>T (V617F) of the JAK2 gene. JAK2 V617F mutations are present in patients with myeloproliferative neoplasms.
Methodology: DNA from whole blood or bone marrow specimens is amplified in an allele-specific droplet digital PCR (ddPCR) multiplex reaction targeting the JAK2 c.1849G>T single nucleotide mutation encoding the V617F mutation. Results are reported as a percent mutated alleles versus wild type alleles. The limit of detection for this assay is 0.2 percent mutated alleles.
Limitations: Variants in genes other than JAK2 are not detected. Variant alleles of JAK2 other than V617F (c.1849G>T) are not reported. Samples with JAK2 V617F mutations below the limit of reporting may not be detected.
Results of this test must always be interpreted in the context of morphologic and other relevant data, and should not be used alone for a diagnosis of malignancy. This test is not intended to detect minimal residual disease.
This test was developed and its performance characteristics determined by ARUP Laboratories. It has not been cleared or approved by the U.S. Food and Drug Administration. This test was performed in a CLIA-certified laboratory and is intended for clinical purposes.
