Distal Arthrogryposis Panel, Sequencing

ARUP test code 3003917

Distal Arthrogryposis Specimen

whole Blood

Distal Arthrogryposis Interp

Negative

INDICATION FOR TESTING
Distal arthrogryposis.

RESULT

No pathogenic variants were detected in any of the genes tested.

INTERPRETATION

No pathogenic variants were identified by massively parallel sequencing of the coding regions and exon-intron boundaries of the genes tested. This result decreases the likelihood of, but does not exclude, a heritable form of distal arthrogryposis. Please refer to the background information included in this report for a list of the genes analyzed and limitations of this test.

RECOMMENDATIONS

Medical screening and management of this individual should rely on clinical findings and family history. Genetic consultation is recommended.

COMMENTS

Likely benign and benign variants are not included in this report.

This result has been reviewed and approved by [REDACTED]

BACKGROUND INFORMATION: Distal Arthrogryposis Panel, Sequencing

CHARACTERISTICS: Distal arthrogryposes (DA) are a subset of arthrogryposis disorders that involve contractures of the distal parts of the limbs. The contractures are congenital but typically do not have primary neurologic and/or muscle disease; the shared findings among DA include a consistent pattern of hand and foot involvement, limited involvement of the proximal joints, and variable expressivity. There are multiple types of DA caused by different genes (genetic heterogeneity).

PREVALENCE: 1 in
