Orthopoxvirus (includes monkeypox virus) by PCR

ARUP test code 3005716

Orthopoxvirus Source	Lesion Swab
Orthopoxvirus by PCR	Not Detected

NOT DETECTED - A negative result does not rule out the presence of PCR inhibitors in the patient specimen or assay specific nucleic acid in concentrations below the level of detection by the assay.

INTERPRETIVE INFORMATION: Orthopoxvirus by PCR

This assay does not differentiate members of the orthopoxviruses. In the United States, a detected result is most likely due to monkeypox virus or vaccinia virus. Other orthopoxviruses may be considered if appropriate. Refer to the US Centers for Disease Control and Prevention if additional confirmatory testing is needed.

This test was developed and its performance characteristics determined by ARUP Laboratories. It has not been cleared or approved by the US Food and Drug Administration. This test was performed in a CLIA certified laboratory and is intended for clinical purposes.
