INTERPRETIVE INFORMATION: BK Virus by Quantitative NAAT, Urine
The quantitative range of this assay is 2.30 - 8.00 log IU/mL (200 - 100,000,000 IU/mL).
An interpretation of "Not Detected" does not rule out the presence of inhibitors or BKV DNA concentration below the level of detection of the assay. Care should be taken in the interpretation of any single viral load determination.
International standardization has improved comparability of assay results across laboratories, but discrepancies still exist due to commutability issues with the standard.
