Drug Detection Panel and THC Metabolite, Umbilical Cord Tissue, Qualitative

ARUP test code 3006371

Gabapentin, Cord, Qual Not Detected ng/g (Ref Interval: Cutoff 10)

THC-COOH, Cord, Qual Not Detected ng/g (Ref Interval: Cutoff 0.2)
 INTERPRETIVE INFORMATION: Marijuana Metabolite, Umbilical Cord Tissue, Qualitative
 Methodology: Qualitative Liquid Chromatography-Tandem Mass Spectrometry
 This test is designed to detect and document exposure that occurred during approximately the last trimester of a full term pregnancy, to a common cannabis (marijuana) metabolite. Alternative testing is available to detect other drug exposures. The pattern and frequency of drug(s) used by the mother cannot be determined by this test. A negative result does not exclude the possibility that a mother used drugs during pregnancy. Detection of drugs in umbilical cord tissue depends on extent of maternal drug use, as well as drug stability, unique characteristics of drug deposition in umbilical cord tissue, and the performance of the analytical method. Drugs administered during labor and delivery may be detected. Detection of drugs in umbilical cord tissue does not insinuate impairment and may not affect outcomes for the infant. Interpretive questions should be directed to the laboratory.
 This test was developed and its performance characteristics determined by ARUP Laboratories. It has not been cleared or approved by the US Food and Drug Administration. This test was performed in a CLIA certified laboratory and is intended for clinical purposes.

6-Acetylmorphine, Cord, Qual Not Detected ng/g (Ref Interval: Cutoff 1)

7-Aminoclonazepam, Cord, Qual Not Detected ng/g (Ref Interval: Cutoff 1)

Alpha-OH-Alprazolam, Cord, Qual Not Detected ng/g (Ref Interval: Cutoff 0.5)

Alpha-OH-Midazolam, Cord, Qual Not Detected ng/g (Ref Interval: Cutoff 2)

H=High, L=Low, *=Abnormal, C=Critical

Unless otherwise indicated, testing performed at:

Alprazolam, Cord, Qual	Not Detected ng/g	(Ref Interval: Cutoff 0.5)

INTERPRETIVE INFORMATION: Drug Detection Panel, Umbilical Cord Tissue, Qualitative

Methodology: Qualitative Liquid Chromatography/Tandem Mass Spectrometry

Detection of drugs in umbilical cord tissue is intended to reflect maternal drug use during approximately the last trimester of a full-term pregnancy. The pattern and frequency of drug(s) used by the mother cannot be determined by this test. A negative result does not exclude the possibility that a mother used drugs during pregnancy. Detection of drugs in umbilical cord tissue depends on extent of maternal drug use, as well as drug stability, unique characteristics of drug deposition in umbilical cord tissue, and the performance of the analytical method. Drugs administered during labor and delivery may be detected. Detection of drugs in umbilical cord tissue does not insinuate impairment and may not affect outcomes for the infant. Interpretive questions should be directed to the laboratory.

Refer to the test directory for additional umbilical cord testing options.

This test was developed and its performance characteristics determined by ARUP Laboratories. It has not been cleared or approved by the US Food and Drug Administration. This test was performed in a CLIA certified laboratory and is intended for clinical purposes.

EER Drug Panel and THC, Umbilical Cord
