Recoverin Antibody, IgG by Immunoblot, Serum

ARUP test code 3016794

Recoverin Ab, IgG by Immunoblot, Serum

Positive * (Ref Interval: Negative)

INTERPRETIVE INFORMATION: Recoverin Ab, IgG by Immunoblot, Serum
Antibodies to recoverin are found in a subset of patients with cancer-associated retinopathy. Symptoms of rapidly progressive bilateral vision loss may precede detection of cancer, and a positive test result should prompt a search for malignancy, most often small cell lung adenocarcinoma. A negative test result does not rule out the diagnosis of autoimmune vision loss. Results should be interpreted in the context of the patient's clinical history, neurologic and ophthalmologic exam, and other laboratory findings.

This test was developed and its performance characteristics determined by ARUP Laboratories. It has not been cleared or approved by the U.S. Food and Drug Administration. This test was performed in a CLIA-certified laboratory and is intended for clinical purposes.
