Human Papillomavirus (HPV) High Risk Screen, by Transcription-Mediated Amplification (TMA), ThinPrep

ARUP test code 3016943

HPV Source Cervical

HPV, High Risk by TMA

Detected *

INTERPRETIVE INFORMATION: HPV, High Risk by TMA

This test detects E6/E7 viral messenger RNA of 14 high-risk HPV types (16, 18, 31, 33, 35, 39, 45, 51, 52, 56, 58, 59, 66, and 68) associated with cervical cancer and its precursor lesions. This test does not discriminate between the 14 high-risk HPV types. Sensitivity may be affected by specimen collection methods, stage of infection, and the presence of interfering substances. Results should be interpreted in conjunction with other available laboratory and clinical data. A negative high-risk HPV result does not exclude the presence of other high-risk HPV types.

HPV testing should not be used for screening or management of atypical squamous cells of undetermined significance (ASCUS) in women under age 21.
