REFERENCE INTERVAL: Allergen, Interpretation

Less than 0.10 kU/L.....Class 0....No significant level detected
 0.10-0.34 kU/L.....Class 0/1...Clinical relevance undetermined
 0.35-0.70 kU/L.....Class 1.....Low
 0.71-3.50 kU/L.....Class 2.....Moderate
 3.51-17.50 kU/L.....Class 3.....High
 17.51-50.00 kU/L.....Class 4.....Very High
 50.01-100.00 kU/L.....Class 5.....Very High
 Greater than 100.00ku/L..Class 6.....Very High

Allergen results of 0.10-0.34 kU/L are intended for specialist use as the clinical relevance is undetermined. Even though increasing ranges are reflective of increasing concentrations of allergen-specific IgE, these concentrations may not correlate with the degree of clinical response or skin testing results when challenged with a specific allergen. The correlation of allergy laboratory results with clinical history and in vivo reactivity to specific allergens is essential. A negative test may not rule out clinical allergy or even anaphylaxis.
