**Collection Date:** 00/00/0000 00:00

**Vitamin C, Plasma (High-Dose Therapy)**

ARUP test code 3017651

Vitamin C, Plasma

**5500 umol/L H (Ref Interval: 23-114)**

Intravenous vitamin C (IVC) administration produces millimolar plasma ascorbate (vitamin C) concentrations. Therapeutic concentrations average 15 mmol/L and range from 1-30 mmol/L. The maximum plasma concentration achieved by oral supplementation of vitamin C is approximately 250 umol/L.

Vitamin C concentration is reported as micromoles per liter (umol/L). To convert concentration to millimoles per liter (mmol/L), multiply the result by 0.001.

This test was developed and its performance characteristics determined by ARUP Laboratories. It has not been cleared or approved by the US Food and Drug Administration. This test was performed in a CLIA certified laboratory and is intended for clinical purposes.
