Anti-Mutated Citrullinated Vimentin (MCV) Antibody, Serum

ARUP test code 3019462

Anti-MCV IgG Antibody **162.7 U/mL H (Ref Interval: <=19.9)**

INTERPRETIVE INFORMATION: Anti-Mutated Citrullinated Vimentin, Ab

Anti-MCV antibody concentrations of greater than or equal to 20 U/mL is used as a positivity cutoff according to the assay's package insert and an internal verification study. Positive results should be interpreted in the context of patient's clinical presentation, laboratory and/or radiologic findings, and current disease guidelines.

Anti-MCV can be found in patients negative for anti-CCP antibodies. Anti-MCV can be a useful marker for early RA diagnosis, and positivity has been associated with disease activity and poor radiographic prognosis.
