Hemoglobin Evaluation

HPLC Report

Impression: Normal Hemoglobin evaluation.

Normal HPLC and capillary electrophoresis results do not rule out the possibility of alpha globin gene deletions associated with silent carrier status or alpha thalassemia trait. Individuals who carry a rare, Greek beta thalassemia variant often have a normal Hb A2 and may not be identified by this assay. Please correlate with clinical and laboratory findings.

INTERPRETIVE INFORMATION: Hemoglobin HPLC and CE Eval with Reflex

HPLC Report: Results from HPLC are reported. Results were confirmed by capillary electrophoresis.
See CE Report: Results from capillary electrophoresis are reported under Hemoglobin Evaluation by Capillary Electrophoresis (3017102). Results were confirmed by HPLC.

This test was developed and its performance characteristics determined by ARUP Laboratories. It has not been cleared or approved by the U.S. Food and Drug Administration. This test was performed in a CLIA-certified laboratory and is intended for clinical purposes.
