New York DOH Approval Status:	This test is New York DOH approved.
Interpretive Data:	
Allergen results of 0.10-0.34 kU/L are intended for specialist use as the clinical relevance is undetermined. Even though increasing ranges are reflective of increasing concentrations of allergen-specific IgE, these concentrations may not correlate with the degree of clinical response or skin testing results when challenged with a specific allergen. The correlation of allergy	

laboratory results with clinical history and in vivo reactivity to specific allergens is essential. A

negative test may not rule out clinical allergy or even anaphylaxis.
