Interpretive Data:

Allergen, Food, Hazelnut With Reflex to Components, IgE 3018638 HAZELNUT B

| 3018638, HAZELNUT R           |   |  |
|-------------------------------|---|--|
| Specimen Requirements:        |   |  |
| Patient Preparation:          | Multiple patient encounters should be avoided.  |  |
| Collect:                      | Serum separator tube.   |  |
| Specimen Preparation:         | Separate serum from cells ASAP or within 2 hours of collection. Transfer 0.8 mL serum to an ARUP standard transport tube. (Min: 0.5 mL). For multiple allergen orders refer to "Allergen Specimen Collection Instructions" at www.aruplab.com/testing/resources/specimen. |  |
| Transport Temperature:        | Refrigerated.   |  |
| Unacceptable Conditions:      | Postmortem samples  |  |
| Remarks:                      |   |  |
| Stability:                    | After separation from cells: Ambient: 48 hours; Refrigerated: 2 weeks; Frozen: 1 month  |  |
| Methodology:                  | Quantitative ImmunoCAP Fluorescent Enzyme Immunoassay   |  |
| Performed:                    | Sun-Sat   |  |
| Reported:                     | 1-3 days  |  |
| Note:                         | This assay will initially test hazelnut whole allergen. If the hazelnut whole allergen result is greater than or equal to 0.1 kU/L, the hazelnut components Cor a 1, Cor a 8, Cor a 9, Cor a 14 will be ordered. Additional charges apply.                                |  |
| CPT Codes:                    | 86003; if reflexed, add 86008 x4  |  |
| New York DOH Approval Status: | This test is New York DOH approved.   |  |

Effective Date: January 21, 2025

Effective Date: January 21, 2025

Allergen results of 0.10-0.34 kU/L are intended for specialist use as the clinical relevance is undetermined. Even though increasing ranges are reflective of increasing concentrations of allergen-specific IqE, these concentrations may not correlate with the degree of clinical response or skin testing results when challenged with a specific allergen. The correlation of allergy laboratory results with clinical history and in vivo reactivity to specific allergens is essential. A negative test may not rule out clinical allergy or even anaphylaxis.

| Reporting Range<br>(reported in kU/L) | Probability of IgE<br>Mediated Clinical<br>Reaction | Class Scoring |
|---------------------------------------|---|---------------|
| Less than 0.10                        | No significant level detected                       | 0             |
| 0.10-0.34                             | Clinical relevance undetermined                     | 0/1           |
| 0.35-0.70                             | Low   | 1             |
| 0.71-3.50                             | Moderate  | 2             |
| 3.51-17.50                            | High  | 3             |
| 17.51-50.00                           | Very High   | 4             |
| 50.01-100.00                          | Very High   | 5             |
| Greater than 100.00                   | Very High   | 6             |

## Reference Interval:

| Test<br>Number | Components                   | Reference Interval              |
|----------------|------------------------------|---------------------------------|
|                | Allergen, Food, Hazelnut IgE | Less than or equal to 0.34 kU/L |
